Agriculture

Primary activities are those that involve the extraction of raw materials from the earth. This includes mining, agriculture, fishing and forestry. Secondary activities are those that involve the processing of raw materials into finished goods. Tertiary activities are those that involve the provision of services. Quaternary activities are those that involve the provision of information services. Quinary activities are those that involve the provision of high-level decision-making services.

Primary activities include all those connected with extraction and production of natural resources. Secondary activities are concerned with the processing of these resources into consumer goods. Tertiary activities are concerned with the provision of services. Quaternary activities are concerned with the provision of information services. Quinary activities are concerned with the provision of high-level decision-making services.

Agriculture is a primary activity. It includes growing crops, raising livestock, fishing and mining of minerals. In the world, 50 per cent of persons are engaged in agricultural activity. The bulk of Africa's population is still dependent on agriculture.

Favourable topography of soil and climate are vital for agriculture activity. The land on which we grow our crops is known as arable land (Fig. 4.1). In the map below, you can see the agricultural activity concentrated in those regions of the world where suitable factors for the growing of crops exist.

In each lesson the learners will: Establish what they already know about a topic Learn new facts about a topic Practise using the new knowledge, concepts and skills they have acquired in the lesson.
